## EXPLANATION of TERMS

**CCF:** 100 cubic feet, a measurement of the volume of natural gas usage recorded by the meter.

**PRESSURE FACTOR:** a factor that the reading must be multiplied by to arrive at the actual CCF usage.

**BTU FACTOR:** a factor that converts CCF units to energy units in Therms, based on the BTU of natural gas delivered.

BTU Factor can vary month to month.

**THERMS:** 1 therm = 100,000 BTU; the result of multiplying the CCF volume of natural gas used times the BTU factor. Therms are the MTNG billing units.
